

Webmail.us Selects Vision Point Systems for Advanced Software Development

Fruits of Collaboration Will Be Advanced Communications Services that Seamlessly Integrate with Existing Webmail and Email Hosting Platform

BLACKSBURG, VA, February 15, 2005 – Webmail.us, the premier provider of on-demand email hosting backed by its industry leading customer service and support, has selected Vision Point Systems for advanced software development. The two fellow Virginia Tech Corporate Research Center based companies will collaborate on the development of web-based communication applications that will seamlessly integrate with the Webmail.us email hosting platform.

“We continue to add functionality, features and advanced service offerings that provide significant value for our customers,” said Patrick Matthews, Chief Executive Officer at Webmail.us. “We selected Vision Point Systems to help us shorten our time-to-market for implementing some of our upcoming features. Vision Point Systems has an extremely talented team of software engineers that made our choice an easy one. We look forward to working with them and launching future services, the first of which will be released in the beginning of the second quarter.”

“Our team is excited to work with the Webmail folks,” explained Yong Lee, Chief Executive Officer at Vision Point Systems. “We believe that our in-depth knowledge into the ‘software as a service’ industry has really allowed us to add value to the Webmail team through both software development and creative input. They are working on several cutting-edge services and we look forward to being a part of their innovation.”

More than 4,500 businesses leverage Webmail.us on-demand email hosting services for secure, reliable, spam-free, virus-free email. The company, along with its growing list of private-label reseller partners, provides email hosting solutions to small and geographically dispersed enterprises. The company works with service providers to deploy its hosted email system across various industry segments including automotive retailers, franchises, direct sellers, financial service companies and real estate agencies, among others.

The Webmail.us hosted email platform provides businesses with a powerful alternative to enterprise email software packages, in addition to integrated security and anti-spam protection—all for a fraction of the cost of purchasing and managing the solution in-house. The email-hosting platform is housed in carrier-grade data centers, to ensure maximum uptime. Webmail.us also goes to great lengths to ensure its customers’ privacy—promising not to sell customer data or advertise to them—key reasons for being awarded the TRUSTe privacy seal.

About Vision Point Systems
